MoCo Sign up

Free community events for Montgomery County, Maryland.

MoCo Sign up is a simple, independent prototype that helps residents find free local events — and helps organizers list them — without needing an account to browse, post, or sign up.

Live site: https://www.mocosignup.com/

> This is an independent community prototype. It is not an official Montgomery County or Montgomery County Public Libraries site.

For residents

- Browse free events across Montgomery County by neighborhood, category, and date
- See what's upcoming, what's popular, and what's happening near you
- Reserve a spot in a few taps — no account required
- Cancel a reservation if your plans change

For organizers

- Post a free event in a few minutes — no account required to post
- Events are checked automatically before they go live
- Events that need a closer look are sent to an admin review queue instead of going straight to the public feed
- See who signed up for your events, and message attendees through the site

How it works

- **No account needed to post or sign up.** Posting and reserving are open to everyone, to keep it simple — especially for seniors and first-time users.
- **Automatic checks.** New events pass a built-in checker and automated moderation before they are published. Low-quality or flagged posts are held for admin review.
- **Admin review.** Admins can approve events from the review queue so they appear in the public feed, or reject them.
- **Spam protections.** The site limits how often one poster can submit, and blocks exact duplicate events sent within a day.
- **Languages.** The interface is available in English, Spanish, Chinese, French, and Korean. Event creators can also tag the language of their event description.

Accessibility

MoCo Sign up aims to meet WCAG 2.2 AA, based on a vendor self-assessment.

- An accessibility statement is available at https://www.mocosignup.com/accessibility
- A VPAT (Voluntary Product Accessibility Template) self-assessment for WCAG 2.2 Level A and AA is available from that page

This is a self-assessment, not a formal third-party audit or certification.

Tech notes

- Single-page site, deployed with Vercel
- Data and sign-ups are stored in Supabase
- Event text is checked with automated moderation before publishing

This repository contains the site's front-end code. No passwords, private keys, or admin credentials are stored in this repository — sign-in is handled through Supabase Auth.
