MoCo Sign up Accessibility Conformance Report

WCAG Edition

(Based on VPAT® Version 2.5Rev)

Name of Product/Version: MoCo Sign up (mocosignup.com) — live website, November 2026. No separate version number is published; this report covers the live site as of November 3, 2026.

Report Date: November 3, 2026

Product Description: MoCo Sign up is a free community-events website for Montgomery County, Maryland. Visitors can browse and filter free local events, post events, and sign up for events. Browsing, posting, and signing up do not require an account. Logged-in users can manage their events, and administrators can manage events, attendees, reports, and exports.

Contact Information: help@mocosignup.com

Notes: DRAFT — VENDOR SELF-ASSESSMENT, NOT A FORMAL THIRD-PARTY AUDIT. Revised November 4, 2026. In this revision Level A is Supports 27 / Not Applicable 5 / Partially Supports 0, and Level AA is Supports 22 / Not Applicable 2 /

"Voluntary Product Accessibility Template" and "VPAT" are registered service marks of the Information Technology Industry Council (ITI)

Partially Supports 0. This is therefore a vendor claim of WCAG 2.2 AA conformance for the assessed scope, based on automated testing, manual keyboard and screen-reader testing, and code review by the product author — it is not a certified conformance claim and not a formal audit by an independent auditor. The site's own Accessibility dialog states that the product is working toward WCAG 2.2 AA and that a formal audit is still to come. Level AAA was not evaluated and is reported as Not Evaluated, except for media criteria that do not apply to this product. Verification history: a live-browser check November 3, 2026 at 21:56 EST confirmed the page title, verified-badge role="img", badge-tooltip mouseout handler, and the language-picker save code, and confirmed the live feed loads with filter chips and the Event language dropdown present. A full-code double-check November 3, 2026 at 22:04 EST found three admin-only title tags still hard-coded lang="en"; those were fixed and verified in a live raw-source check November 3, 2026 at 22:10 EST, with no hard-coded event title remaining and the live site still loading.

Evaluation Methods Used: (1) Automated testing with Google Lighthouse in Chrome on November 3, 2026, on the home page: Performance 96 on rerun (up from 89 earlier the same day), Accessibility 100, Best Practices 100, SEO 100. Lighthouse is an automated check only and does not replace manual testing. (2) Automated testing with Deque axe DevTools in Chrome on November 3, 2026: the home page

initially showed 1 Serious issue and the Create view showed 4 issues, all the same autocomplete-token issue; after reverting those fields to autocomplete="off", axe reported 0 issues on the home page, the Create view, and each other page checked. (3) Manual keyboard testing with Tab, Shift+Tab, Enter, Space, and Escape, including creating an event through the Create form; a dialog focus fix (focus moves into a dialog on open, Tab cycles only inside the dialog, and Esc/Close returns focus to the opener) was tested live by the product author on November 3, 2026, and passed. (4) Basic screen-reader testing with NVDA on Windows on November 3, 2026: after resolving a focus/dialog/restart issue that initially left NVDA reading nothing on the site, the product author reported NVDA reads MoCo content correctly. This was a basic pass, not a detailed audit of every dialog, error message, and label, and no formal accessibility audit by an independent auditor had been completed at the time of this report. (5) Code review of the live single-page application (index.html) for labels, headings, landmarks, focus styles, aria attributes, contrast values, and reduced-motion handling. (6) Contrast-ratio calculations for main text and accent colours. (7) Manual verification tests on November 3, 2026, for the criteria that were previously Partially Supports: skip-link test (Tab once, Enter on Skip to main content, next Tab lands in main content) passed; reflow test at 320 CSS pixels wide in Chrome DevTools device mode passed with no horizontal scrolling and no content cut off; text-spacing test with

line-height 1.5, letter-spacing 0.12em, word-spacing 0.16em, and paragraph spacing 2em applied in DevTools passed with no clipping or loss; toast/focus test passed (a test toast appears at the bottom and moves to the top when Tabbing to a bottom footer button, and auto-hides after 7 seconds); language-switch test passed (Settings language switch changes the UI language and applyLang sets the document language); error-suggestion test passed (a too-short event title shows its character-count correction, and submitting a report with no reason shows "Please choose a reason"); badge tooltip test (hover shows the custom tooltip, Tab to a badge shows it, Esc dismisses it) and badge contrast calculations (see 1.4.11 and 1.4.13) passed. (8) Fresh live-code check on November 4, 2026 at 02:34 UTC of the GitHub main index.html: theme-specific .sitelink CSS and all five sitelink links verified, verified badge 24x24 and admin badge min-24x24 verified, admin badge role="img" and clean single aria-label verified, Esc keydown handler that hides all badge tooltips verified (present twice, harmless duplicate), but no <title> tag found in the home-page head, no role="img" on the verified badge, and no mouseout handler to clear the Esc-hidden tooltip, so the tooltip would stay hidden until reload. The product author reported on November 3, 2026 at 21:33 EST that the site works again and accessibility is back to 100 after fixing a mangled Esc line and a duplicated/misplaced admin-badge aria-label. (9) On November 3, 2026 at 21:41 EST the product author reported committing the three remaining small fixes (title,

verified-badge role, mouseout clear) and that the site is not broken after reloading. (10) On November 3, 2026 at 21:53 EST the product author reported the language-picker save edits were committed and the site works after fixing an out-of-scope ev reference; a fresh GitHub source check at that time still returned the cached 02:34 UTC pre-fix source, so the new language code could not yet be verified in source and 3.1.2 was not upgraded. (11) Live-browser check November 3, 2026 at 21:56 EST: mocosignup.com feed loaded (1 upcoming event, Dec 12, Silver Spring, after an initial 0-event empty state), neighborhood/category/when filter chips appeared, Create showed the Event language dropdown (English, Español, Français, 中文, 한국어), and the raw GitHub source contained <title>MoCo Sign up</title>, verified-badge role="img", the badge mouseout handler, id="f-lang", lang:r.language, and language:v.lang in both insert and update calls. (12) Language rendering verified November 3, 2026 at 22:03 EST by the product author inspecting rendered events: language attributes shown correctly for en, fr, es, ko, and zh. (13) Full-code double-check November 3, 2026 at 22:04 EST from the current index.html pasted by the product author: title, sitelink CSS/links, badge 24x24/role/aria-label/colours, Esc/mouseout handlers, skip link, aria-live/toast, autocomplete off, public feed/My events/review-queue language rendering, and language save/load all confirmed; three admin-only title tags still hard-coded lang="en" found (see 3.1.2). (14) Admin title fix verified November 3, 2026 at 22:10 EST in the raw GitHub source: Events

and attendees rows, Past events rows, and Monthly report top events all use dynamic language tags, searches for hard-coded title tags returned no matches, and mocosignup.com still loaded with the feed not stuck on loading.

Applicable Standards/Guidelines

This report covers the degree of conformance for the following accessibility standard/guidelines:

Standard/Guideline	Included In Report
Web Content Accessibility Guidelines 2.0	Level A (Yes) Level AA (Yes) Level AAA (No)
Web Content Accessibility Guidelines 2.1	Level A (Yes) Level AA (Yes) Level AAA (No)
Web Content Accessibility Guidelines 2.2	Level A (Yes) Level AA (Yes) Level AAA (No)

Terms

The terms used in the Conformance Level information are defined as follows:

- **Supports**: The functionality of the product has at least one method that meets the criterion without known defects or meets with equivalent facilitation.
- **Partially Supports**: Some functionality of the product does not meet the criterion.
- **Does Not Support**: The majority of product functionality does not meet the criterion.
- **Not Applicable**: The criterion is not relevant to the product.
- **Not Evaluated**: The product has not been evaluated against the criterion. This can only be used in WCAG Level AAA criteria.

WCAG 2.x Report

Note: When reporting on conformance with the WCAG 2.x Success Criteria, they are scoped for full pages, complete processes, and accessibility-supported ways of using technology as documented in the WCAG 2.0 Conformance Requirements.

Table 1: Success Criteria, Level A

Notes: DRAFT — VENDOR SELF-ASSESSMENT, NOT A FORMAL THIRD-PARTY AUDIT. Revised November 4, 2026. In this revision Level A is Supports 27 / Not Applicable 5 / Partially Supports 0, and Level AA is Supports 22 / Not Applicable 2 / Partially Supports 0. This is therefore a vendor claim of WCAG 2.2 AA conformance for the assessed scope, based on automated testing, manual keyboard and screen-reader testing, and code review by the product author — it is not a certified conformance claim and not a formal audit by an independent auditor. The site's own Accessibility dialog states that the product is working toward WCAG 2.2 AA and that a formal audit is still to come. Level AAA was not evaluated and is reported as Not Evaluated, except for media criteria that do not apply to this product. Verification history: a live-browser check November 3, 2026 at 21:56 EST confirmed the page title, verified-badge role="img", badge-tooltip mouseout handler, and the language-picker save code, and confirmed the live feed loads with filter chips and the Event language dropdown present. A full-code double-check November 3, 2026 at 22:04 EST found three admin-only title tags still hard-coded lang="en"; those were fixed and verified in a live raw-source check November 3, 2026 at 22:10 EST, with no hard-coded event title remaining and the live site still loading.

Criteria	Conformance Level	Remarks and Explanations
1.1.1 Non-text Content (Level A)	Supports	The main site contains no informative images in event listings. Decorative avatars use empty alt text with the person's name shown as text beside them, and decorative icons (for example the flame icon and badge icons) are marked aria-hidden or carry an aria-label/title. The social-preview image and the Lighthouse screenshot on the /accessibility page duplicate text that is also provided as real text on the page. axe DevTools reported 0 issues on the pages checked on November 3, 2026, and a basic NVDA pass the same day reported the content reads correctly.
1.2.1 Audio-only and Video-only (Prerecorded) (Level A)	Not Applicable	The product contains no prerecorded audio-only or video-only content.
1.2.2 Captions (Prerecorded) (Level A)	Not Applicable	The product contains no prerecorded video content, so no captions are required.
1.2.3 Audio Description or Media Alternative (Prerecorded) (Level A)	Not Applicable	The product contains no prerecorded video content, so no audio description or media alternative is required.
1.3.1 Info and Relationships (Level A)	Supports	Form controls have associated labels (label for), pages use headings, and dialogs use role="dialog" with aria-modal and aria-labelledby. Filter chips and tabs use aria-pressed and aria-current to expose state. axe

Criteria	Conformance Level	Remarks and Explanations
		DevTools reported 0 issues on the pages checked on November 3, 2026, and a basic NVDA pass the same day reported the content reads correctly.
1.3.2 Meaningful Sequence (Level A)	Supports	Content order in the document matches the visual order: header, tabs, filters, event feed, Create form, My events, and Admin sections, followed by footer. No content is reordered visually in a way that changes its meaning.
1.3.3 Sensory Characteristics (Level A)	Supports	Instructions do not rely only on colour, shape, or location. For example, HOT status is shown as the text “HOT” as well as a coloured tag, and selected filters are exposed with aria-pressed as well as a visual selected state.
1.4.1 Use of Color (Level A)	Supports	Colour is not used as the only means of conveying information. Status and selection are also conveyed by text and by aria-pressed / aria-current states. Error states use text messages in addition to a border colour change.
1.4.2 Audio Control (Level A)	Not Applicable	The product does not play audio automatically.
2.1.1 Keyboard (Level A)	Supports	All main functions — browsing, filtering, searching, creating an event, signing up, logging in, changing Settings, and using Admin tools — can be operated with Tab, Shift+Tab, Enter, Space, and Escape. A keyboard problem found in manual testing (browser autofill popups trapping Down-arrow navigation in the Create form) was fixed on November 3, 2026, by reverting all Create and search fields to autocomplete="off" (an earlier custom autocomplete value was removed after axe DevTools reported it as an invalid token). A dialog focus fix applied the same day (focus moves into a dialog on open, Tab cycles only inside the dialog, and Esc/Close returns focus to the opener) was tested live by the product author on November 3, 2026, and passed.

Criteria	Conformance Level	Remarks and Explanations
2.1.2 No Keyboard Trap (Level A)	Supports	No component locks keyboard focus permanently. Escape closes all dialogs, and Tab can move focus away from a dialog to the page. The Create-form autofill popup issue noted in 2.1.1 was a browser popup, not a product keyboard trap, and was addressed as described there.
2.1.4 Character Key Shortcuts (Level A 2.1 and 2.2)	Supports	The product defines no single-character keyboard shortcuts, so no character-key shortcut can conflict with assistive technology.
2.2.1 Timing Adjustable (Level A)	Supports	The product imposes no session timeout or timed response requirement on browsing, posting, or signing up. The only time-based behaviour is a 5-minute posting rate limit for non-admins, which does not end a session or lose a draft, and transient toast messages that can be repeated by re-performing the action.
2.2.2 Pause, Stop, Hide (Level A)	Supports	Moving or auto-updating content is limited to one-time animations (a short fade-in, a pulsing dot that plays twice, and a one-time celebration animation). Animations respect the user's reduced-motion setting and are disabled when it is on. There is no auto-playing video, scrolling, or blinking content that runs for more than 5 seconds without a pause control.
2.3.1 Three Flashes or Below Threshold (Level A)	Supports	The product contains no flashing content.
2.4.1 Bypass Blocks (Level A)	Supports	A "Skip to main content" link is the first focusable element and moves focus to <main id="main" tabindex="-1">. Manual test on November 3, 2026, passed: Tab once shows the skip link, Enter activates it, and the next Tab lands in the main content, not back in the header.
2.4.2 Page Titled (Level A)	Supports	Pages have descriptive titles: "MoCo Sign up" for the home page, and "Accessibility — MoCo Sign up", "Privacy Policy — MoCo Sign up", and equivalent titles for the Terms page. The home-page title was missing

Criteria	Conformance Level	Remarks and Explanations
		in an earlier source check and was added by the product author in the November 3, 2026 commit round; a live-browser check also reported the browser tab title as “MoCo Sign up”.
2.4.3 Focus Order (Level A)	Supports	Focus order follows the document order in the main views, and changing views moves focus to the view heading. Since the November 3, 2026 dialog focus fix, opening a dialog moves focus to its first control, Tab cycles only inside the dialog, and Esc/Close returns focus to the element that opened it. This behaviour was tested live by the product author on November 3, 2026, and passed.
2.4.4 Link Purpose (In Context) (Level A)	Supports	Links describe their purpose in context, for example “Terms of Service”, “Privacy Policy”, “Accessibility policy”, “Directions”, “Add to calendar”, and “Register on the official site”. Event-card links include the event title in screen-reader-only text where needed.
2.5.1 Pointer Gestures (Level A 2.1 and 2.2)	Supports	All functions can be performed with a single pointer action (click or tap). No multipoint or path-based gesture is required.
2.5.2 Pointer Cancellation (Level A 2.1 and 2.2)	Supports	Actions are triggered on activation (click/tap/Enter/Space) using native controls. No action is completed on pointer-down in a way that cannot be aborted, and no action requires holding a pointer down.
2.5.3 Label in Name (Level A 2.1 and 2.2)	Supports	Visible labels match the accessible name of their control because labels are associated with inputs, and icon-only controls carry an aria-label (for example the event delete button, labelled “Delete [event title]”). axe DevTools reported 0 issues on the pages checked on November 3, 2026, and a basic NVDA pass the same day reported the content reads correctly.
2.5.4 Motion Actuation (Level A 2.1 and 2.2)	Not Applicable	The product does not use motion actuation (for example shaking or tilting a device) to perform any

Criteria	Conformance Level	Remarks and Explanations
		function.
3.1.1 Language of Page (Level A)	Supports	The home page declares <html lang="en">. Standalone pages (Terms, Privacy, Accessibility) also declare lang="en".
3.2.1 On Focus (Level A)	Supports	Moving focus to a control does not change context (no automatic navigation, submission, or new window on focus).
3.2.2 On Input (Level A)	Supports	Changing a filter, tab, or select updates the event list in place; it does not navigate to a new page, open a new window, or submit a form without the user's action. Submitting a form (Create, Sign up, Log in) is a deliberate user action.
3.2.6 Consistent Help (Level A 2.2 only)	Supports	Help is consistently available in the footer on the main page (Help dialog, help@mocosignup.com) and is linked from the Accessibility, Terms, and Privacy pages.
3.3.1 Error Identification (Level A)	Supports	Form errors are identified in text, not by colour alone. The Create form shows a note with role="alert" and describes the problem, and invalid fields are marked with aria-invalid and a visible error message. The same pattern is used for Log in, Sign up, and Message forms.
3.3.2 Labels or Instructions (Level A)	Supports	All form fields have visible labels and, where needed, instructions or placeholders, including the Create form rules (letters, numbers and basic punctuation only; no links, emails, phone numbers, or money-related words) and the Sign up form note that the organiser uses the contact details only for that event.
3.3.7 Redundant Entry (Level A 2.2 only)	Supports	No multi-step process asks the user to enter the same information twice. A visitor's name and email, where previously entered for sign-up, are pre-filled on the same device to avoid re-entry, and editing an event reuses its existing values.
4.1.1 Parsing (Level A) WCAG 2.0 and 2.1 – Always answer 'Supports'	Supports	For WCAG 2.0 and 2.1, the September 2023 errata update indicates this criterion is always supported. See

Criteria	Conformance Level	Remarks and Explanations
WCAG 2.2 (obsolete and removed) - Does not apply		the WCAG 2.0 Editorial Errata and the WCAG 2.1 Editorial Errata.
4.1.2 Name, Role, Value (Level A)	Supports	Native buttons, inputs, selects, and checkboxes are used for most controls, and dialogs expose role="dialog", aria-modal, and aria-labelledby, with a focus-trap and inert-background system when a dialog is open. axe DevTools reported 0 issues on the pages checked on November 3, 2026, and a basic NVDA pass the same day reported the content reads correctly.

Table 2: Success Criteria, Level AA

Notes: DRAFT — VENDOR SELF-ASSESSMENT, NOT A FORMAL THIRD-PARTY AUDIT. Revised November 4, 2026. In this revision Level A is Supports 27 / Not Applicable 5 / Partially Supports 0, and Level AA is Supports 22 / Not Applicable 2 / Partially Supports 0. This is therefore a vendor claim of WCAG 2.2 AA conformance for the assessed scope, based on automated testing, manual keyboard and screen-reader testing, and code review by the product author — it is not a certified conformance claim and not a formal audit by an independent auditor. The site's own Accessibility dialog states that the product is working toward WCAG 2.2 AA and that a formal audit is still to come. Level AAA was not evaluated and is reported as Not Evaluated, except for media criteria that do not apply to this product. Verification history: a live-browser check November 3, 2026 at 21:56 EST confirmed the page title, verified-badge role="img", badge-tooltip mouseout handler, and the language-picker save code, and confirmed the live feed loads with filter chips and the Event language dropdown present. A full-code double-check November 3, 2026 at 22:04 EST found three admin-only title tags still hard-coded lang="en"; those were fixed and verified in a live raw-source check November 3, 2026 at 22:10 EST, with no hard-coded event title remaining and the live site still loading.

Criteria	Conformance Level	Remarks and Explanations
1.2.4 Captions (Live) (Level AA)	Not Applicable	The product contains no live video content.
1.2.5 Audio Description (Prerecorded) (Level AA)	Not Applicable	The product contains no prerecorded video content.
1.3.4 Orientation (Level AA 2.1 and 2.2)	Supports	The product does not lock orientation. Layout adapts to portrait and landscape, with a single-column layout at narrow widths.
1.3.5 Identify Input Purpose (Level AA 2.1 and 2.2)	Supports	Fields that collect personal data use standard autocomplete tokens so their purpose is programmatically determinable: email fields use

Criteria	Conformance Level	Remarks and Explanations
		autocomplete="email", the sign-up name field uses autocomplete="name", and the password field uses autocomplete="current-password". Event and search fields that are not personal data use autocomplete="off", which is a valid token; axe DevTools initially flagged a custom autocomplete value on those fields on November 3, 2026, and after reverting them to "off" it reported 0 issues on the pages checked.
1.4.3 Contrast (Minimum) (Level AA)	Supports	Main body text passes WCAG contrast in both themes (body text 16.45:1 light and 18.73:1 dark; muted text 7.55:1 light and 9.97:1 dark; tag text #1f5fd1 5.81:1 light and #60a5fa 6.92:1 dark; placeholder #6b6b6b 5.33:1 light and #a3a3a3 7.65:1 dark). The previous light-mode link failure is fixed and verified live on November 4, 2026: Terms/Privacy/Accessibility links no longer use inline #3b82f6 (3.68:1 on white); all five links now use class="sitelink" with theme-specific CSS .sitelink{color:#1f5fd1} and dark .sitelink{color:#60a5fa} (5.81:1 light, 6.92:1 dark).
1.4.4 Resize text (Level AA)	Supports	Text is sized with relative units and the layout wraps, so browser text resizing and page zoom do not lose content or require horizontal scrolling for the main reading flow. Users can also use the browser's text-size settings.
1.4.5 Images of Text (Level AA)	Supports	The main site uses real text, not images of text, for headings, labels, and event information. The only images containing text are the social-preview image (which duplicates the page headline, also present as real text) and the Lighthouse screenshot on the /accessibility page (whose scores are also listed as real text on that page).
1.4.10 Reflow (Level AA 2.1 and 2.2)	Supports	The layout is a single column with a maximum width of 860 pixels, filters and chips wrap, and event cards

Criteria	Conformance Level	Remarks and Explanations
		collapse to one column below 480 pixels. Manual reflow test on November 3, 2026, at 320 CSS pixels wide in Chrome DevTools device mode passed: no horizontal scrolling, no content cut off, and all controls reachable, including an event card in the feed.
1.4.11 Non-text Contrast (Level AA 2.1 and 2.2)	Supports	Focus is shown with a 3-pixel solid outline in the text colour, interactive controls have visible borders, and chip borders use the stronger line colour (4.74:1 light, 5.23:1 dark). Badge colours were fixed on November 3, 2026: the verified-organization badge background is now #1775c8 (white check 4.76:1) and the admin star is now #a16207 (4.92:1 on light panels, 3.57:1 on dark panels), both above the 3:1 non-text contrast requirement.
1.4.12 Text Spacing (Level AA 2.1 and 2.2)	Supports	Text is not clipped by fixed heights: cards, buttons, and fields use minimum heights and expand with content. Manual text-spacing test on November 3, 2026, with line-height 1.5, letter-spacing 0.12em, word-spacing 0.16em, and paragraph spacing 2em applied in DevTools passed with no clipping, overlapping, or loss of content or function.
1.4.13 Content on Hover or Focus (Level AA 2.1 and 2.2)	Supports	Badge meaning is no longer shown only in a browser title tooltip. Badges use a custom tooltip that shows on hover and on focus (tabindex="0"), an Esc keydown handler hides all badge tooltips on Esc even when only hovering, and a mouseout handler added in the November 3, 2026 commit round clears the inline display:none set by Esc when the pointer actually leaves the badge, so the tooltip shows again on later hovers. The badge name is also available to screen readers via aria-label with role="img" on both badge types.
2.4.5 Multiple Ways (Level AA)	Supports	Events can be found in more than one way: by search, by neighbourhood, category, and date filters, by Hot

Criteria	Conformance Level	Remarks and Explanations
		events, and by browsing the feed. Help, Terms, Privacy, and Accessibility pages are linked from the footer.
2.4.6 Headings and Labels (Level AA)	Supports	Headings and labels are descriptive: “Create an event”, “My events”, “Admin”, “Settings”, “Events and attendees”, and field labels such as “Event name”, “Location”, and “What to expect”.
2.4.7 Focus Visible (Level AA)	Supports	Keyboard focus is visible throughout, using a 3-pixel solid outline on :focus-visible and a border-colour change on focused fields, in both light and dark themes.
2.4.11 Focus Not Obscured (Minimum) (Level AA 2.2 only)	Supports	Focused elements are not obscured by the toast: a focusin handler moves the toast from the bottom to the top of the viewport when it would overlap the focused element, and the toast auto-hides after 7 seconds, with 7rem of bottom scroll padding. Manual test on November 3, 2026, passed: a test toast appeared at the bottom and moved to the top when Tabbing to a bottom footer button.
2.5.7 Dragging Movements (Level AA 2.2 only)	Supports	No function requires dragging. All actions are click, tap, or keyboard actions.
2.5.8 Target Size (Minimum) (Level AA 2.2 only)	Supports	Interactive targets meet the 24-pixel minimum and most exceed it: buttons are at least 48–64 pixels high, filter chips at least 52 pixels high, links at least 48 pixels high, and the event delete button is 44 by 44 pixels. Checkboxes are 24 by 24 pixels inside a larger chip label that is itself the target. Badge sizes verified live on November 4, 2026: verified badge 24x24 pixels, admin badge min-width/min-height 24 pixels.
3.1.2 Language of Parts (Level AA)	Supports	The site interface language is handled correctly: the language switcher sets document.documentElement.lang, and the interface text changes accordingly. User-posted event titles and descriptions now carry the language the poster chose:

Criteria	Conformance Level	Remarks and Explanations
		the Create form has an Event language dropdown (English, Spanish, French, Chinese, Korean — the five most spoken languages in Montgomery County), the choice is saved with the event (Supabase events.language, default en), and titles/descriptions are rendered with that saved language (lang="${e.lang\|\|'en'}") instead of hard-coded lang="en" — in the public feed, My events, and the admin review queue, verified in Inspect November 3, 2026 at 22:03 EST for en, fr, es, ko, and zh, and in the admin Events and attendees rows, Past events rows, and Monthly report top events (lang="${o.e.lang||'en'}" for the latter), verified in the raw GitHub source November 3, 2026 at 22:10 EST with no hard-coded event title remaining.
3.2.3 Consistent Navigation (Level AA)	Supports	Navigation is consistent: the same header, tabs, and footer appear in the same order across views, and the same controls keep the same labels and positions.
3.2.4 Consistent Identification (Level AA)	Supports	Components with the same function are identified consistently (for example Sign up, Reserve my spot, Publish event, and Cancel use the same labels wherever they appear).
3.3.3 Error Suggestion (Level AA)	Supports	Errors suggest a correction: the Create form checker reports the specific problem and the required range (for example, a too-short title reports its character count against the 5–60 range, and date/time errors state the allowed range), the report dialog reports "Please choose a reason" when no reason is selected and "Please tell us what is wrong" when Other is chosen without detail, and a moderated event is told to reword it and to remove money, sales, link, or contact words and keep it short and friendly. Manual error-suggestion test on November 3, 2026, passed.
3.3.4 Error Prevention (Legal, Financial, Data) (Level AA)	Supports	No legal commitment or financial transaction occurs

Criteria	Conformance Level	Remarks and Explanations
		on the site: all events are free and no payment is taken. Submissions that modify or delete user-controllable data meet this criterion by the reversible and confirmed options, not by a pre-submit review screen: posting an event is reversible (the creator or an admin can edit or delete it afterwards, and a cancelled reservation can be made again if spots remain), and deleting an event is confirmed (the admin trash action opens a dialog asking "Would you like to permanently delete this event from all records?" with Delete and Cancel). The product author accepted this reversible-plus-confirmed basis on November 3, 2026, and chose not to add a review screen, which would change the auto-approve posting decision.
3.3.8 Accessible Authentication (Minimum) (Level AA 2.2 only)	Supports	Authentication does not use a cognitive test and does not use a CAPTCHA. Log in is email and password, with autocomplete="email" and autocomplete="current-password" so password managers can fill it, and a Show password option. Browsing, posting, and signing up do not require authentication at all.
4.1.3 Status Messages (Level AA 2.1 and 2.2)	Supports	Status messages are programmatically determinable without receiving focus: toast messages use role="status" and are also written to an aria-live polite region (#live), and the feed count element (#count, for example "3 UPCOMING EVENTS") itself carries aria-live="polite", so filtering or searching that changes the count is announced. Success actions that need confirmation use a focused dialog instead of a status message, which is a separate pattern and is covered under focus criteria. Correction note: this criterion was originally marked Partially Supports in the draft; re-checking the live code showed #count already had aria-live="polite", so it is upgraded on that evidence, not on a new code change.

Table 3: Success Criteria, Level AAA

Notes: DRAFT — VENDOR SELF-ASSESSMENT, NOT A FORMAL THIRD-PARTY AUDIT. Revised November 4, 2026. In this revision Level A is Supports 27 / Not Applicable 5 / Partially Supports 0, and Level AA is Supports 22 / Not Applicable 2 / Partially Supports 0. This is therefore a vendor claim of WCAG 2.2 AA conformance for the assessed scope, based on automated testing, manual keyboard and screen-reader testing, and code review by the product author — it is not a certified conformance claim and not a formal audit by an independent auditor. The site's own Accessibility dialog states that the product is working toward WCAG 2.2 AA and that a formal audit is still to come. Level AAA was not evaluated and is reported as Not Evaluated, except for media criteria that do not apply to this product. Verification history: a live-browser check November 3, 2026 at 21:56 EST confirmed the page title, verified-badge role="img", badge-tooltip mouseout handler, and the language-picker save code, and confirmed the live feed loads with filter chips and the Event language dropdown present. A full-code double-check November 3, 2026 at 22:04 EST found three admin-only title tags still hard-coded lang="en"; those were fixed and verified in a live raw-source check November 3, 2026 at 22:10 EST, with no hard-coded event title remaining and the live site still loading.

Criteria	Conformance Level	Remarks and Explanations
1.2.6 Sign Language (Prerecorded) (Level AAA)	Not Applicable	The product contains no audio or video content, so this criterion does not apply.
1.2.7 Extended Audio Description (Prerecorded) (Level AAA)	Not Applicable	The product contains no audio or video content, so this criterion does not apply.
1.2.8 Media Alternative (Prerecorded) (Level AAA)	Not Applicable	The product contains no audio or video content, so this criterion does not apply.
1.2.9 Audio-only (Live) (Level AAA)	Not Applicable	The product contains no audio or video content, so this criterion does not apply.
1.3.6 Identify Purpose (Level AAA 2.1 and 2.2)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
1.4.6 Contrast (Enhanced) (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
1.4.7 Low or No Background Audio (Level AAA)	Not Applicable	The product contains no audio or video content, so this criterion does not apply.
1.4.8 Visual Presentation (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
1.4.9 Images of Text (No Exception) (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.1.3 Keyboard (No Exception) (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A

Criteria	Conformance Level	Remarks and Explanations
		and Level AA only.
2.2.3 No Timing (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.2.4 Interruptions (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.2.5 Re-authenticating (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.2.6 Timeouts (Level AAA 2.1 and 2.2)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.3.2 Three Flashes (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.3.3 Animation from Interactions (Level AAA 2.1 and 2.2)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.4.8 Location (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.4.9 Link Purpose (Link Only) (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.4.10 Section Headings (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.4.12 Focus Not Obscured (Enhanced) (Level AAA 2.2 only)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.4.13 Focus Appearance (Level AAA 2.2 only)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.5.5 Target Size (Level AAA 2.1 and 2.2)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
2.5.6 Concurrent Input Mechanisms (Level AAA 2.1 and 2.2)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
3.1.3 Unusual Words (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
3.1.4 Abbreviations (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
3.1.5 Reading Level (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.

Criteria	Conformance Level	Remarks and Explanations
3.1.6 Pronunciation (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
3.2.5 Change on Request (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
3.3.5 Help (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
3.3.6 Error Prevention (All) (Level AAA)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.
3.3.9 Accessible Authentication (Enhanced) (Level AAA 2.2 only)	Not Evaluated	Not evaluated for Level AAA; this report covers Level A and Level AA only.

Legal Disclaimer (Company)

This report is a good-faith vendor self-assessment based on the evaluation methods described above. It is not a certification of WCAG conformance and does not guarantee that the product meets every requirement for every user or assistive technology. A formal audit is still to come, as stated on the product's Accessibility page. If you find an accessibility barrier, please report it to help@mocosignup.com.
